

Elma DT 902 - Motor rotation indicator - with three functions

- Shows the direction of rotation without electrical contact

EAN 5706445140138 / EL-NR 6398157180

Elma DT 902 is a new handy tool for anyone working with supply, service and control of three-phase motors. The instrument has three functions: - Shows directly before connection to an electrical current engine, how it should be connected, to rotate properly. - Phase Sequence Test for displaying rotating field and phase indication on three-phase electrical distribution. - Rotary indicator shows, without electrical contact, rotation of a motor in operation. Ideally, when the motor shaft can not be seen directly. With Elma DT 902 you can now avoid accidents and the difficulty of connecting 3-phase motors. The instrument meets IEC 61010-1 CAT III. Supplied incl. test leads, test tips, alligator clips and instruction manual.

Technical data:

Voltage indication:	1-440 V AC
Phase Sequence Test:	120-440 V AC
Frequency:	2-400 Hz
Test current:	<3.5 mA
Battery :	9V 6F22 (included)
Dimensions:	124x61x27 mm
Weight:	150 g
